RESIDENTIAL PROPERTY PRICE INDEX REPORT

2nd Quarter 2025

RESIDENTIAL PROPERTY PRICE INDEX

Second Quarter 2025

**Property Prices Rise in Q2 2025,
with Faster Growth Outside NCR**

Residential Property Price Index by Area

Figure 1a
Residential Property Price Index (RPPI) by Area
Q1 2019 – Q2 2025

Residential property prices across various types of housing units in the Philippines continued to increase year-on-year (y-o-y) and quarter-on-quarter (q-o-q) in Q2 2025. Philippine housing prices rose by 7.5 percent y-o-y in the second quarter, marginally lower than the 7.6 percent increase recorded in Q1 2025. Despite the slight deceleration in annual growth, prices accelerated q-o-q, rising from 2.6 percent in Q1 2025 to 4.2 percent in Q2 2025 (Figure 1a).

By location, Areas Outside the National Capital Region (AONCR) led the nationwide RPPI increase in Q2 2025. Housing prices in AONCR maintained its upward trajectory, with y-o-y growth accelerating from 3.0 percent in Q1 2025 to 11.5 percent in Q2 2025. Meanwhile, price growth in the National Capital Region (NCR) slowed from 13.9 percent in Q1 2025 to 2.4 percent in Q2 2025. On a q-o-q basis, AONCR residential property prices grew by 10.5 percent, while NCR prices declined by 3.6 percent (Figure 1a).

Figure 1b
RPPI by Area in AONCR
 Q1 2019 – Q2 2025

All areas in AONCR posted y-o-y and q-o-q increases in residential property prices in Q2 2025. Balance Greater Manila Area (GMA) recorded the highest annual growth in housing prices at 13.2 percent, marking its strongest growth since Q1 2020. This was followed by Metro Cebu (11.5-percent), Other Areas in the Philippines (8.8 percent), and Metro Mindanao (7.7 percent) (Figure 1b).

Similarly, all areas contributed to the increase in AONCR housing prices from quarter-ago levels. Metro Cebu, Balance GMA, and Other Areas in the Philippines posted double-digit q-o-q growth rates of 12.2 percent, 11.7 percent, and 10.2 percent, respectively. These were also the highest quarterly increases in residential property prices in these areas since Q2 2019. Metro Mindanao also registered an increase of 1.9 percent (Figure 1b).

RPPI by Housing Type

Figure 2a
RPPI by Type of Housing Unit in the Philippines
Q1 2019 – Q2 2025

In Q2 2025, nationwide RPPI growth was driven by price increases in the houses category. Specifically, prices of houses rose by 13.1 percent, offsetting the modest 0.2-percent decline in prices of condominium units. On a q-o-q basis, the upturn in the overall RPPI was likewise supported by a significant 10.3-percent increase in house prices, which outweighed the 2.8-percent drop in condominium unit prices (Figure 2a).

Figure 2b
RPPI by Type of Housing Unit in the NCR
Q1 2019 – Q2 2025

In the NCR, residential property prices by house type mirrored national trends.

Annual growth rate was driven by the rise in house prices, which accelerated from 11.2 percent in Q1 2025 to 14.3 percent in Q2 2025. However, this increase was partially tempered by the decline in condominium unit prices, reversing from a 14.2-percent growth in Q1 2025 to a 2.2-percent contraction in Q2 2025.

On a q-o-q basis, the overall decline in NCR residential property prices was mainly driven by a 5.4-percent drop in condominium unit prices. This outweighed the 1.9-percent increase in house prices (Figure 2b).

Figure 2c
RPPI by Type of Housing Unit in AONCR
Q1 2019 – Q2 2025

In AONCR, all housing categories contributed to both the y-o-y and q-o-q increases in residential property prices. Annual growth was driven by both houses and condominium units, which rose by 12.6 percent and 6.2 percent, respectively. On a q-o-q basis, the overall uptick was attributed to the 12.3-percent and 4.0-percent price increases for houses and condominium units, respectively (Figure 2c).

Number of Residential Real Estate Loans Granted

Figure 3a
Number of Loans Granted for All Types of Housing Units by Area
Q1 2019 – Q2 2025

Percent Change on the Number of Loans Granted for All Housing Units	From year ago			From quarter ago		
	Q2 2024	Q1 2025	Q2 2025	Q2 2024	Q1 2025	Q2 2025
Philippines	-3.2	-1.9	14.7	-9.9	-21.7	5.4
NCR	-0.9	2.0	10.3	1.4	-33.4	9.7
AONCR	-4.2	-3.3	16.6	-14.0	-16.2	3.8
Other Areas in the Philippines	1.2	-2.2	4.3	-11.1	-8.1	-5.1
Balance GMA	-10.9	-11.1	22.5	-19.1	-21.3	11.4
Metro Cebu	7.0	50.1	18.7	18.1	3.9	-6.6
Metro Mindanao	20.6	0.8	12.9	-14.6	-23.6	-4.4

In Q2 2025, nationwide availments of residential real estate loans (RREs) increased on both y-o-y and q-o-q bases. The number of RREs granted for all types of housing units in the Philippines rose by 14.7 percent y-o-y, following four consecutive quarters of decline. This uptick aligns with the results of the Q2 2025 Consumer Expectations Survey (CES), which showed a less pessimistic outlook among consumers regarding the purchase of a house and lot. Reflecting this shift in sentiment, a larger share of households considered Q2 2025 as a favorable time to purchase residential property.¹

The higher nationwide total was boosted by growth across all areas, led by AONCR (16.6 percent) and supported by the NCR (10.3 percent). Within AONCR, higher loan take-up expanded across all areas: Balance GMA registered the largest increase at 22.5 percent, followed by Metro Cebu at 18.7 percent, Metro Mindanao at 12.9 percent, and Other Areas in the Philippines at 4.3 percent (Figure 3a).

On a q-o-q basis, nationwide housing loan availments rose by 5.4 percent, underpinned by increases in both the NCR (9.7 percent) and AONCR (3.8 percent). This trend is consistent with the Q2 2025 CES results, which showed a less pessimistic outlook among consumers regarding the purchase of house and lot relative to the previous quarter. Similarly, a larger share of households considered Q2 2025 to be a good time to acquire residential property compared with Q1 2025.¹

¹ The confidence index (CI) on buying a house and lot eased from -51.5 percent in Q2 2024 and -56.8 percent in Q1 2025 to -49.3 percent in Q2 2025. Similarly, the percentage of households that considered the current quarter a favorable time to purchase a house and lot increased from 24.3 percent in Q2 2024 and 21.6 percent in Q1 2025 to 25.3 percent in Q2 2025.

The quarterly increase in housing loan availments in AONCR was primarily attributed to the higher number of RREs in Balance GMA, which rose by 11.4 percent. This growth was sufficient to offset the declines recorded in Metro Cebu (-6.6 percent), Other Areas in the Philippines (-5.1 percent), and Metro Mindanao (-4.4 percent) (Figure 3a).

Figure 3b
Number of Loans Granted for Condominium Units by Area
Q1 2019 – Q2 2025

Percent Change on the Number of Loans Granted for Condominium Units	From year ago			From quarter ago		
	Q2 2024	Q1 2025	Q2 2025	Q2 2024	Q1 2025	Q2 2025
Philippines	-6.5	2.6	39.8	-15.7	-41.9	14.8
NCR	-10.1	3.6	29.8	-11.4	-34.9	10.9
AONCR	2.3	0.8	60.8	-23.5	-51.7	22.1
Other Areas in the Philippines	25.3	47.9	16.3	8.3	-30.9	-14.8
Balance GMA	-20.2	-46.3	184.1	-53.5	-79.6	146.1
Metro Cebu	6.6	55.6	26.7	10.1	-5.6	-10.4
Metro Mindanao	6.8	-8.6	24.9	-29.4	-40.1	-3.6

For condominium units, the number of RREs granted rose sharply in Q2 2025. Annual growth rate accelerated from 2.6 percent in Q1 2025 to 39.8 percent in Q2 2025.² This substantial growth was supported by higher loan availments in both the NCR (29.8 percent) and AONCR (60.8 percent). Within AONCR, residential loan take-up registered positive y-o-y growth, with increases broadly observed across all geographic areas. (Figure 3b).

On a q-o-q basis, loan availments for condominium units expanded in both the NCR and AONCR. Within AONCR, Balance GMA was the only area to register growth during the period (Figure 3b).

² Majority of these transactions involve condominium units priced below the three-year average acquisition cost. Specifically, the proportion of such units rose from 51.9 percent of all condominium transactions in Q2 2024 to 62.0 percent in Q2 2025.

Figure 3c
Number of Loans Granted for Houses by Area
Q1 2019 – Q2 2025

Percent Change on the Number of Loans Granted for Houses	From year ago			From quarter ago		
	Q2 2024	Q1 2025	Q2 2025	Q2 2024	Q1 2025	Q2 2025
Philippines	-1.6	-4.4	2.7	-6.9	-2.4	.
NCR	40.1	-7.5	-45.6	74.1	-22.1	2.4

Metro Mindanao	29.3	7.5	6.6	-4.1	-8.4	-4.9

. rounds off to zero

For houses, the number of RRELs granted in the Philippines recovered in Q2 2025, reversing the 4.4-percent y-o-y decline in Q1 2025 with a 2.7-percent increase in Q2 2025. This recovery was primarily driven by an 8.9-percent rise in loan availments in AONCR, which more than offset the sharp 45.6-percent contraction in the NCR. As the country's main market for house purchases, all areas within AONCR posted growth during the period (Figure 3c).

By contrast, nationwide q-o-q loan availments for houses showed very minimal change, reflecting the net effect of a 2.4-percent increase in the NCR and a 0.1-percent decline in AONCR. Within AONCR, only Balance GMA recorded growth (Figure 3c).

Median Prices

Figure 4
Median Prices per Type of Housing Unit by Area (in Philippine pesos)
Q1 2019 – Q2 2025

In Q2 2025, the median price for all housing types in the Philippines stood at **Php3,405,847**. This figure is lower than the median price for condominium units at **Php3,807,373**, but above the median price for houses at **Php3,137,700**. Among the 10 strata, NCR houses recorded the highest median price at **Php7,011,900**, significantly surpassing all other strata. By contrast, houses in Other Areas in the Philippines registered the lowest median price at **Php2,668,360** (Figure 4).

Weights

Figure 5
Weights by Type of Housing Units in RPPI³
2019 – 2025

³ Weights are derived from the proportion of each stratum's transaction value to the total transaction value in the previous year.

In generating aggregate indices for Q2 2025, NCR condominiums carried the largest weight at 30.6 percent. This was followed by Balance GMA houses, which accounted for 28.6 percent, despite edging downwards in 2025. Meanwhile, houses in the NCR and Other Areas in the Philippines contributed 10.9 percent and 10.5 percent, respectively. Collectively, these four strata comprised 80.6 percent of the total index weight (Figure 5).

Profile of Residential Real Estate Loans

Figure 6
Residential Real Estate Loans Granted
Q2 2025

In Q2 2025, 74.6 percent of RRELs were used to purchase new housing units, while 25.0 percent and 0.4 percent were for the acquisition of pre-owned and foreclosed properties, respectively. By type of housing unit, the majority of residential property loans were utilized for houses (60.4 percent), followed by condominium units (39.6 percent) as illustrated in Figure 6.

By region, 28.5 percent of the total number of RRELs granted were in the NCR, while the remainder were distributed across AONCR as follows: CALABARZON (33.2 percent), Central Luzon (11.9 percent), Central Visayas (8.8 percent), Western Visayas (6.6 percent), Davao Region (4.2 percent), and Northern Mindanao (2.3 percent). The NCR and these six regions combined accounted for 95.5 percent of total housing loans granted by banks (Figure 6).
